Reasons for E/R changes

- Removed vendor phone number and replaced It with the new key vendor ID. We made this change in response to John's suggestion to have an ID for the vendor and to eliminate the potential MVD that was phone number for.
- Replaced Customer key to phone number, as available datasets were already including it as a unique identifier – which made more sense in a real-life aspect. Updates reflected in Sales and Customer attributes.
- Changed attribute EmpName (employee name) in Sale to EmpID as it would provide more creative and precise queries in the future using the Sales relation.
